MURANO · KcolTech

Murano for Call center

Campaigns, agents and results measured.

For contact centers and sales teams.

What Murano does for you

Marketing campaigns
Segments and messages by email, SMS or WhatsApp.

Tickets
Every call or email with an owner and status.

Projects
Client accounts organized with tasks and hours.

Recruitment
Job posts, candidates and interviews.

Meetings
Team meetings with minutes and follow-up.

And every company gets

One system, your own space
Sales, people, money and documents in one place, in the cloud, from any computer or phone. Your company only ever sees its own data.

Everyone sees only their part
Ready-made roles (Admin, Helpdesk, Website, Forms read-only, Customer, Employee) and your own: each login sees only the menus and buttons its role allows.

Secure sign-in
Two-step verification, lockout after wrong passwords, alerts on new computers and optional office-network restriction.

Your website included
Edit your pages, menus, gallery and portfolio yourself, or import the site you already have.

Forms that work for you
Contact forms, complaints books and surveys on your website; every submission numbered, readable, printable and marked as attended.

Email Office
The company mailbox inside Murano: emails linked to customers, bills and payments read automatically.

Helpdesk
Customer requests become tickets with a number, an owner and a history — nothing gets lost.

Accounting that fills itself
Sales, purchases, payments and payroll post to your chart of accounts; profit and loss and balance sheet at any time.

Your team in order
Employees with their login, attendance, leaves, contracts and weekly payroll by hours or commission.

Customer portal
Your customers see their invoices, payments, appointments and tickets, and pay online.

Modules included

accounting · assets · documents · email_office · forms · gallery · helpdesk · hrm · website · sales · pos · purchases · suppliers · products · customers · marketing · meeting · projects · recruit

15. Accounting, expenses and deposits
16. Assets and equipment
17. Marketing
18. Projects and tasks
19. Reports
20. Users and roles
21. Settings

Getting started

Your login belongs to one company and your role decides what you see: menus, buttons and even single tabs. If you need something that is not there, ask your company administrator.

Sign in and your home page

1. Sign in with your email and password.
2. If you used a **standard password** (the one given to new logins, e.g. Empleado2020), Murano asks you to choose your own before entering: at least 8 characters with letters and numbers, not a standard one, not your email, not one of your last 3.
3. If your company (or you, in Profile) turned on **two-step verification**, type the 6-digit code we email you — or the one in your authenticator app. Tick **Remember this computer** and it won't ask again for 30 days.
4. Murano opens your role's home page: the **Dashboard** (first item of the menu), **Daily Tasks** (field crews) or the **Bookings calendar** (salon staff).
5. Use the left menu (☰ on a phone) to move around.
6. On a shared computer, always sign out from your name in the top bar.

> **Note:** 5 wrong passwords in an hour lock your login for 1 hour (you and your administrators get an email). Reset your password by email or ask your administrator to unlock it. A sign-in from a new computer also sends you an email: if it wasn't you, change your password.

Top bar icons

The buttons at the top right of every page. You only see the ones your company and your role allow; you can hide or reorder yours in **Profile › Header icons**.

- **Company selector (SuperAdmin only)** — Which company you are working on. Every page and form follows the company chosen here.
- **POS** — Opens the point of sale (if your role can sell at the register).
- **Settings (gear)** — Appearance of the app: theme, colors, menu layout.
- **Install app** — Installs Murano like an app on this computer or phone. Shown only while the browser offers it.
- **Como Vamos! (today's summary)** — Today at a glance: sales, payments, bookings and what is pending.
- **Full screen** — Uses the whole screen; click again (or Esc) to go back. Not on phones.
- **User manual (open book)** — This manual: **This page** shows help for the screen you are on, **Whole manual** has everything with a search. English or Spanish.
- **Language (globe)** — Changes the language of the app for you. Until you pick one, Murano (sign-in page included) follows your computer's language when it is English or Spanish, otherwise the company's default language.
- **Notifications (bell)** — Work waiting for you (e.g. bookings to confirm, computers to approve). The number is how many; click an item to go there.
- **Clock in / out** — Clocks you in or out for today (if your role has it). Turns green with the time while you are clocked in.
- **Log out** — Signs you out in one click. Always do it on a shared computer.
- **Your name** — **Profile**, Settings, **Appearance** (light / dark / auto) and sign out.

> **Note:** Company administrators choose which icons the whole company sees in **System Settings › Defaults › Users › Header icons**; each person can still show / hide and reorder their own in **Profile**.

Profile, password and header icons

1. Click your name › **Profile**.
2. Change your password, photo and contact details, then **Save**.
3. **Two-step verification**: turn on **Code by email**, or **Set up** an authenticator app (Google / Microsoft Authenticator): scan the QR, type its first code and keep the 8 **recovery codes** somewhere safe (each one lets you in once if you lose the phone). **Forget them** asks again on the computers remembered for 30 days.
4. Under **Header icons**, choose for each icon: Company default, Show (green) or Hide (red).
5. Change their order with the ‹ › arrows: the list goes from left to right in the top bar (**Reset order** puts it back). Then **Save**.

> **Note:** Your PIN (4 to 8 digits, unique in your company) is set by your administrator in Users. It identifies you at the shared register: never share it.

Clock in and clock out

1. When your shift starts, click the **clock** in the top bar. It turns green and shows your clock-in time.
2. When you leave, click it again: Murano shows the hours worked today.
3. Forgot to clock? Tell your manager; they correct it in HRM › Attendance.

Date filters and exports

1. Every list and report has the same date filter: All, Today, This Week … Last Year, plus Start date and End date you can type.
2. **Double-click** a preset to make it your default (★).
3. Export a list or report to PDF or Excel with the buttons above the table.
4. Open a record from a filtered list (Sales, Purchases, Quotations, Customers, Suppliers), then press **Back**, **Cancel** or **Save**: the list comes back exactly as you left it (filters, dates, page, search). Opening the list from the menu starts fresh.

Sales and invoices

Invoices are numbered automatically with your company's own series (prefix + the company's next number).

Find a sale

1. Open **Sales › List Sales**.
2. Filter by date, customer, location or payment status.
3. The **Other due** column shows the customer's other unpaid invoices; open it to see each invoice's date and the reminder emails sent (how many and when).
4. On a phone the list shows the sale information first; swipe the table sideways for more columns.

Create a sale

1. Open **Sales › Add Sale**.
2. Choose the date, the customer and the location.
3. Add products or services; adjust quantity, price, discount or tax per line if your role allows it.
4. Save. The invoice number is given automatically.
5. To repeat an invoice, use **Duplicate** in its row menu in the list: a new sale opens with today's date and the same customer, location and lines (paid invoices too); the top says which invoice it copies. Check it and save.
6. Editing an invoice: the top of the page shows its number (**Edit Sale · INV_…**), customer, date, total, paid and due, its status and payment status, and **View invoice**.

Payments, printing and email

1. Open the sale (or its row menu).
2. **Add payment**: amount, method and date.
3. Print it, or email it to the customer; each email is kept in the sale's history.

POS and cash register

The point of sale for the counter. On a shared register each person sells with their own PIN.

Open the register

1. At the start of the day open **POS**.
2. Open the register with your PIN and the opening cash.
3. Who can open and close it: the roles and users chosen in **Settings › POS › Who can open / close the register**, plus the roles with the "Open / close register" permission. Anyone else sees who can and sells with their PIN on the open register.

Sell

1. Enter your **PIN** so the sale is recorded for you.
2. Add the services and products; choose the customer (or Walk-in).
3. Take the payment; a sale can be split between cash and card.
4. Print or email the receipt.

> **Note:** Commission pay counts the sales recorded under your PIN, or the bookings where you are the stylist.

Close the register

1. At closing, close the register with your PIN and count the cash.
2. Compare with **Reports › Cash Register Report**.

Quotations

Prices you offer before the sale.

Create and convert a quotation

1. **Quotations › Add Quotation**: customer, items and prices.
2. Send it to the customer by email.
3. When accepted, open it and **Create sale**: the invoice is made from the quotation.

Sales contracts (recurring billing)

Weekly or monthly services that bill themselves and schedule their visits.

Create a contract

1. **Sales › Sales Contracts › New**.
2. Pick the customer, the services, the frequency and the start date.
3. Send it for signature.
4. Murano creates each invoice and each scheduled visit on its date; you find them in the Sales list and in Daily Tasks.

Customers

One customer = one email in your company. Matching never uses the phone and never crosses companies.

Add a customer

1. Search by email first to avoid duplicates.
2. **People › Customers › Add**: name, email, phone, address.
3. With an email the customer gets a login to the customer portal (invoices, payments, bookings).
4. Customers can't delete their portal account themselves: the company admin turns portal access off from **People › Customers** (portal option in the list or in the customer's form).

Customer details

1. Open a customer to see sales, payments, balance and, when your company uses them, bookings, service jobs and emails.

Import customers

1. **People › Import Customers**: download the sample file, fill it in and upload it.
2. Rows with an email that already exists in your company update that customer instead of creating a new one.

Purchases and suppliers

What you buy and who you buy it from.

Add a supplier

1. **People › Suppliers › Add**: name, email and phone.
2. With an email the supplier gets a portal login to see their purchase orders and payments.

Record a purchase

1. **Purchases › Add Purchase**: supplier, location and items.
2. When the goods arrive mark it received: stock goes up.
3. Add the payment to the supplier from the purchase.

Products and services

What you sell, its prices and its stock in each location.

Add a product or service

1. **Products › Add Product** (or **+** next to the product search in a sale, to add it right there).
2. Type or pick the **main service / group** — a new one is kept as you type. Then choose **what you are adding**: the main item only, or a **new sub-item under it** (also under an existing one). **"Will be saved as"** shows the final name and the items already in that group; a duplicate is warned.
3. Choose the type (product with stock, or service), category and price.
4. For products set the cost, unit and alert quantity.
5. Leave the product **Tax** at 0% when your invoices use the company's Order Tax (System Settings › Defaults › Default Tax): otherwise that product is taxed twice. New products start at 0%.
6. Save; print barcodes from **Products › Print Barcode**.

Stock count, adjustments and transfers

1. **Count Stock**: count a location and let Murano show the differences.
2. **Stock Adjustment**: correct the quantity with a reason.
3. **Stock Transfers**: move stock between locations.

HR: employees, attendance and payroll

Every employee has a login, created automatically. Each tab of the employee page has its own view / edit permission.

Add an employee

1. **HRM › Employees › Add**: personal data, department, designation, shift.
2. Set the pay type: **hourly** (rate) or **commission** (%), and the date it starts.
3. The login is created automatically; it is active when the company has a default employee password (System Settings › Defaults › Users).

The employee page

1. Tabs: basic data, company, social, experience, accounts, user (login), production, payments and **Assets assigned**.
2. You see only the tabs your role allows; without "all employees" you see only your own record.
3. **Print profile** prints the whole record with the photo.

Remove an employee

1. Open the employee › **Remove** and set the leaving date.

2. In one step Murano disables the login and signs it out everywhere, unassigns open jobs, upcoming bookings and tickets, and lists the assets to collect.
3. The history (sales, jobs, attendance) is kept.

Attendance

1. **HRM › Attendance** lists every clock-in and clock-out.
2. Add or correct a record when someone forgot to clock.
3. Totals by person: **Reports › Attendance Summary**.

Leave requests

1. **HRM › Leave request › Add**: employee, type, dates and reason.
2. Approve or reject it from the list.

Weekly payroll

1. **HRM › Payroll › Generate weekly payroll** and choose the week.
2. Hourly: hours of the jobs completed that week × rate. Commission: that week's sales × %.
3. Check each line and mark it paid: it is posted to accounting automatically.

Email Office

The company mailbox inside Murano, linked to customers, suppliers and payments.

Read the mailbox

1. **Email Office › Received** or **Sent**.
2. Open a message to read it and its attachments; it is linked to the customer or supplier with that address.
3. Payment emails (for example Zelle) are detected and can be matched to the customer.

Emails assigned to customers by themselves

1. **Received**: assigned to the customer whose email (or additional email) is the sender.
2. **Sent**: assigned to the first recipient that is a customer — the To addresses, then CC. Invoices and reminders sent from a sale go to that sale's customer even when sent to another address.
3. When you add or change a customer's email (People › Customers), their emails not assigned yet are assigned at once.
4. Assigning one email assigns **every email with the same address** — received from it and sent to it (To or CC) — to that customer. With "Save this address on the customer" ticked (the default) the address is also saved on the customer, so future emails go to them by themselves.

> **Note:** Matching is by email only and within your company; a contact email counts only when a single customer has it.

Mailbox settings and rules

1. **Email Office › Settings**: the mailbox account, folders and import.
2. Rules sort incoming mail into bills, claims or general.

Website

The company website, with its own address. It can use our website theme, a one-page template or an imported website.

Menu of an imported website (English and Spanish)

1. **Website › Menus › Imported website menu**: rename, re-link, add, reorder or nest the items, then **Save website menu** — it is rebuilt in every page of the site.
2. Each item has an **ES** label: the Spanish pages (name-es.html, or pages marked as Spanish) show it, and their links go to the Spanish version of each page (about-es.html…) by themselves. An empty ES label shows the English one.

One-page template

1. **Website › Front page › One-page template**: a single page with sections (header, services, about, gallery, portfolio, reviews, booking, contact) and a menu that scrolls to each one.

2. **Design**: five designs; the one for your business type is marked *Recommended*. Switching design keeps your texts and pictures; **Start over** puts the starting texts back. Pick the **Main colour** and whether to **Show prices**.
3. **Sections**: turn each one on or off, change the order with the arrows, and write the menu label, title, text and button in English and Spanish (switch at the top). An empty menu label keeps the section out of the menu.
4. Services start from your products and services; edit, add or remove them, with a price and a picture. Gallery and Portfolio show the pictures of those modules; Contact shows the company's phone, email, address and a map.
5. Add only real reviews from real customers. **Extra menu links** add your store, a page or another site to the menu.
6. **Save**, then **Preview** to see it before applying. **Use the one-page template** makes it your front page; visitors switch EN / ES in the menu.

Website settings

1. **Website Management › Website Settings**: Front page, Homepage blocks and Branding (website address, name, logo).
2. With our theme you also get Hero, SEO, Top bar & footer and Social links; an imported website brings its own.

Edit pages and sections

1. **Website › Pages** lists each page of the imported website.
2. Edit texts, pictures and links, or open **Sections** to edit a whole block.
3. In a section, **Use our booking calendar** puts Murano's booking form in place of an old one.

Import a website

1. **Front page › Import**: from the site's address or its files.
2. Or **start from a ready-made website**: complete designs made by KcolTech — **Preview** one, then **Use this**; change its texts, pictures and links in **Website › Pages**.
3. Before replacing the current site, Murano saves it in **Saved websites** (Preview, Use this, Delete).

Gallery

Pictures for the website's gallery page and block.

Manage pictures

1. Upload pictures, drag them into order and show or hide each one.
2. Or import them from the imported website.

Forms

Contact forms, complaints books, surveys: built here, published on your website or by link, and every submission kept with its number.

Forms dashboard

1. **Forms › Dashboard**, with the date filter on top.
2. The cards show the submissions of each form (e.g. contacts, complaints) and how many are **Read** and **Unread**; click a card to open those submissions.
3. **Grouped submissions**: pick a form and a field (e.g. complaint type or agency) to see how many submissions each answer has, with its %.

Read and attend the submissions

1. **Forms › All forms**: click a form's name (or its inbox icon) to see its submissions; unread ones are in bold.
2. Click a row: the submission opens in a large window. **Previous / Next** go through the list.
3. **Print**, **PDF** and **Send by email** (to any address, with an optional message) share it.
4. **Mark attended** and write a note of what was done: the list shows who attended it and when.
5. **Forms › Report**: every form together, with the filters Read / Unread, form, dates and search; **Export Excel (CSV)**.

> **Note:** The **Formularios** role reads only: it can see, print, send and attend submissions, but not create, edit or delete forms or submissions.

Build a form

1. **Forms › New form**, then add fields from the left (text, email, phone, date, dropdown, choices, file, heading, paragraph…). Drag them to reorder; set each one's width (full, half, third) and **Required**.
2. A field may have only a placeholder and no label: then it shows no empty line and no *; when it is required and left empty, its box turns red.
3. **Settings › After sending**: show a message, go to another page, or **message, then another page** after the seconds you choose.
4. **Settings › Look**: colors of the button, form, page and text, font, corners, **width** (480–1200 px or full) and the **send button above or below** the form.
5. **Header**: the company's logo, its own logo or none; its height, a color band behind it, left or centered, and whether it also shows when the form is embedded on a website.
6. Emails: notice to the company on every submission and an optional receipt to the visitor with their number.

Publish it

1. **Publish**: the form's own link (and QR), or the code to put it on your website — an iframe or the script. The codes always start with https://.
2. Paste the code in your web page as it is; if your page is https and the code says http://, the browser blocks it and nothing shows.
3. **Preview** shows the form on its own page or as embedded on a website.

Help desk

Support tickets from staff, customers and suppliers.

My tickets

1. **Help desk › My tickets › New**: describe the problem and attach a screenshot.
2. Follow the answers in the same ticket.

Answer tickets

1. **Help desk › Tickets**: filter by status, assign, answer and close.
2. Settings (categories, agents): **Help desk › Settings**.

Accounting, expenses and deposits

Sales, purchases, payroll and expenses post to the books automatically.

Record an expense

1. **Accounting › Create Expense**: date, category, account, amount and the bill.
2. Deposits work the same way in **Create deposit**.

Financial reports

1. Profit and loss, balance sheet, trial balance and tax summary under **Accounting**.
2. Journal entries show every automatic and manual posting.

Assets and equipment

Equipment and tools: who has them, maintenance and value.

Register and assign

1. **Asset Management › Add Asset**: name, category, cost and hourly cost (used in job costs).
2. **Assignments**: give it to an employee; it shows on their Assets tab.
3. **Due Assets** lists what must come back.

Marketing

Campaigns to the right customers by email, SMS or WhatsApp.

Send a campaign

1. **Customer Segments**: choose who receives it.
2. **Templates**: the message for email, SMS or WhatsApp.
3. **Campaigns › Create**: segment + template + date; results in **Reports**.

> **Note:** A campaign only reaches the customers of its own company and goes out from that company's mail server. A company with Marketing turned off (Settings › Modules) never sends: scheduled campaigns go back to draft. Test addresses (example.com, the demo customers) are skipped.

Projects and tasks

Internal projects, their tasks, milestones and time.

Plan and follow

1. **Projects › Add**: customer, dates and team.
2. **Tasks** and the **Task Board**: drag tasks between columns.
3. **Timesheets**: hours per person and project.

Reports

Each report appears only if your role has it.

Run a report

1. Open **Reports** and pick one (sales, payments, profit, customers, stock, cash register, attendance ...).
2. Set the dates with the date filter and the location if needed.
3. Export to PDF or Excel.

Users and roles

A user can do only what their role allows. Nothing is given by job title.

Users

1. **Users › Add** creates administrator logins only. Employees, customers, suppliers and sales agents get theirs from their own module.
2. Edit a login here: role, locations, password and PIN.
3. The **Active / Disabled** switch signs the person out everywhere. You can't disable yourself.
4. Filter the list by **Type**, **Role** (or "No role") and **Status**; **Clear filters** shows everyone again.
5. When the login belongs to an employee, **Edit** also shows that employee (department, position, shift, pay) with a link to HRM › Employees, where it is changed.
6. A login locked after 5 wrong passwords shows **Locked until HH:MM** under its status; **Unlock** (role with Login security) opens it at once.

Roles

1. **User Management › Group Permissions**: create or edit a role.
2. Tick what the role can do, module by module and, for employees, tab by tab (view / edit).
3. Choose the role's **Home page** (for example Daily Tasks or the Bookings calendar).
4. The **Users** column shows how many users have each role; click the number to open Users filtered by that role.

The standard roles of every company

1. Each company has its own group of roles; no company sees another one's.
2. **Admin Compañía**: every form and module of the company (one per company).
3. **Helpdesk**: tickets and the company mail.
4. **Website**: website management and the portfolio.
5. **Formularios**: the forms and their submissions, read only — no new form, no delete.
6. **Customer** and **Employee**: given automatically to customers' and employees' logins.

7. Supplier, Sales Agent and Online Store appear by themselves when the company creates that kind of login; a business's own roles (hospital, school, a manager or field role) are added as needed.

> **Note:** Only the SuperAdmin works across every company.

Settings

Company-wide options.

Companies

1. **SuperAdmin with AdminSystem picked** in the company switcher: every company, **Add** and **Delete**, plus the global menus (yellow, tag "Global": Login Page Settings, Update Settings, Currencies, Backup, System Health, Login Device Management). **With a company picked** the SuperAdmin works only on that company: this list shows just it and the global menus are hidden.
2. As **SuperAdmin with AdminSystem picked**, every list (users, roles, sales, customers, suppliers, products, purchases, employees, expenses, students, patients, properties…) and every report shows **all companies**, with a **Company** column. With a company picked, only that company's records.
3. **Add** (SuperAdmin) or **Edit** a company. The form goes in steps (Company, Helpdesk, Defaults; when adding: Company, Modules, Helpdesk, Defaults, Admin user, Website); use **Next / Back** or click a step. A step marked in red has something missing.
4. Required: name, business type, owner, company email, phone, address and helpdesk email.
5. **Logo** (step Company; required when adding, optional on Edit): **Upload logo**, then in **Crop / resize** drag the box or its corners to cut it (shape Free, Square 1:1 or Wide 3:1, or **Whole image** for no cut) and pick the size (longest side, 200 to 1200 px); **Use this logo**. It is saved as the company's logo (invoices, menu, customer portal) and shown in the list's **Logo** column.
6. **Business type** (General, IT, Landscaping, Hair salon, Barber, Retail, Restaurant, Catering / buffet, Laundry, Delivery, Call center, Real estate (selling houses), Law services, Hospital / clinic, Factory / manufacturing, School / academy, Office / professional): sets the company's extra accounts, expense categories and demo data, and which modules it starts with.
7. **Modules** (when adding): every company gets Accounting, Assets, Document Archive (each company sees only its own files), Email Office, Gallery, Helpdesk, HRM and Website Management, plus its type's own (e.g. Kitchen for a restaurant or catering, Bookings for a salon or barber, Fleet for delivery, Real Estate listings for a real estate agency, Projects and Documents for a law firm, Hospital Management for a hospital / clinic, Manufacturing (MRP) and Fleet for a factory, School Management and Intranet for a school), already ticked (tag "type"). Tick any other module it needs, or untick one; changing the business type ticks its modules again. **Sales**, **POS**, **Purchases** and **Suppliers** are ticked for every type except **Hospital / clinic**, which bills through Hospital Management. A **hospital** opens on the **Hospital dashboard**, a **school** on the **School dashboard** and a **real estate** company on the **Real Estate dashboard**, with that module first in the side menu. A **school** starts with only School, Portfolio, Intranet, Documents and Website (no sales, products, customers, accounting or HR). Products, customers, reports and settings are always on.
8. The company's **language** is what its users see after signing in (a user who picks another language in the app keeps theirs); the sign-in page follows the computer's language or its EN / ES switch.
9. **Defaults**: currency, language (when adding, it starts in the language you are using — check it before creating), sale prefix (invoice numbers), public address and the default employee / customer passwords (blank keeps the current one).
10. The **Setup** column shows "Complete" or how many required fields a company still lacks; click it to fill them in.
11. A new company starts with the SuperAdmin's current menu (the AdminSystem layout), already in order.

SuperAdmin: enter as a company's admin

1. After signing in, a **SuperAdmin** first sees **How do you want to enter?**: **Go to the dashboard** (as SuperAdmin, every company) or one card per company with its admins and **Enter**.
2. **Enter** opens Murano as that admin — their menu, modules, language and permissions. That company's Network security does not block it.
3. An amber **SuperAdmin** button in the header goes back to the SuperAdmin (and to this choice). Signing out ends it too.

Login page colours by language

1. **Settings › Login Page › Background › Solid color**: one colour for **English** and one for **Español**. The login page uses the Spanish one when it opens in Spanish; empty = same as English. An uploaded image is used for every language.

Which settings a company manages

1. A company's roles can have: **System Settings** (company info, logo, defaults), Appearance, Customize columns, Email templates, Locations, Network security and Login devices.

2. The rest — Mail settings (every company uses AdminSystem's mail server), Payment methods, SMS templates, PayPal, ZATCA, Currencies, Multi-currency, Backup, System health, Translations, Update, Payment gateway, SMS, POS settings, integrations, Loyalty — is for the **SuperAdmin**, unless that module is on for the company (e.g. PayPal, POS or an integration): then its own settings stay available.
3. A company Admin editing a role can't give those settings back; a SuperAdmin can, on purpose (Roles).
4. A **hospital**, **school** or **real estate** company opens on its own dashboard and its users don't see the general Dashboard. They start with **POS off**.
5. Only a **SuperAdmin** can create, edit, disable or delete a SuperAdmin user; a company Admin can never make anyone a SuperAdmin.
6. **Integrations** (the Integrations page, Webhooks, WooCommerce, Shopify, QuickBooks, Xero, Slack, Telegram…) are **off for every company** by default: their settings are shared by the whole system. A SuperAdmin turns one on in Business Modules for a company that really uses it (turn on "Integrations hub & Webhooks" too).
7. A **school** has the roles **Rector** (admin), **Secretaria**, **Profesor**, **Padre de familia** and **Alumno**; parents and students see the Intranet and Documents.

Business modules (turn modules on / off per company)

1. **SuperAdmin** only: **Settings › Modules** (Business Modules), with the company chosen in the company switcher.
2. The list is alphabetical: Accounting, Real Estate, Recruits & Jobs, Meetings, Fleet, Projects, Kitchen, each integration (QuickBooks, Xero, Google Sheets, Mailchimp, Slack, Telegram, PrestaShop, Salla, Jumia…) and more. Turn the switch on / off and **Submit**.
3. A module turned off disappears from that company's menu, its pages can't be opened and the server refuses its requests — for every user and role. Nothing is deleted: turning it back on restores everything as it was.
4. **Sales**, **POS**, **Purchases** and **Suppliers** can be switched off too (their pages, menu items and reports disappear) — a hospital, for example, bills through Hospital Management. Products, customers, reports and settings are the core of the system and always stay on.
5. The switches never hide anything from the **SuperAdmin**: with any company chosen, the SuperAdmin sees and opens every module (to see what the company sees, sign in as one of its users).
6. **Modules of <business type>** turns on the modules a company of that type starts with and turns the others off (the type is the one in Companies › Edit); review and **Submit**.
7. **ZATCA E-Invoicing (Saudi Arabia)** is OFF by default: turn it on only for a company in Saudi Arabia. While it is off there is no ZATCA settings page, no ZATCA QR on invoices / receipts and nothing is sent to ZATCA when a sale or return is saved.

Manage Menu (order of the side menu)

1. **Settings › Manage Menu**: each row has ↑ **/** ↓ (move up / down) and **Move to…** (pick another module, group or the **top level** from a list — a single page can sit in the main menu too); dragging still works. Hide / show items with the eye, then **Save**. Names are the same as in your side menu; an item tagged **not in your menu** is there for other roles of the company.
2. **SuperAdmin working as AdminSystem** (company switcher): Submit and Reset apply to **every company** — their own order is replaced. New companies also start with this layout.
3. **SuperAdmin working as one company**, or a company **Admin**: the change stays in that company only.
4. **Default order** (SuperAdmin working as one company): that company's menu becomes a copy of AdminSystem's — same order, groups, names and hidden items.
5. An Admin can reorder and hide / show; adding, removing or renaming items is for the SuperAdmin.
6. Modules turned off for the company (Settings › Modules) are not listed here nor in the side menu — also their items kept elsewhere (e.g. Hospital Reports under Reports). They keep their place and come back when the module is turned on.

System Settings › Defaults

1. **General**: the company's public address used in every link sent outside (booking codes, emails).
2. **Users**: the default employee password and the **Header icons** shown to everyone in the company.
3. **Invoice PDF › Default**: the **Discount column** and **Tax column** switches hide those columns on the printed invoice AND on the sale form; each shows again by itself on an invoice where a line has a discount or its own tax (a product with a tax %).
4. **Customers** and the other tabs: what each form shows by default.

POS settings

1. **Settings › POS** (a section of Settings): receipt, payment methods at the counter and whether the POS button shows in the header.
2. **Require an open register**: the POS stays locked until a register is opened.

3. **Who can open / close the register**: pick roles and users; roles with the "Open / close register" permission can too. The POS tells anyone else who can and where it is changed.

Network security

1. **Settings › Network security**: turn on **Restrict access by network** and add the office networks (its public IP, e.g. 203.0.113.10, or a range like 203.0.113.0/24). **Add it** puts your current IP in the list.
2. Choose what users follow: **Restricted** (safe default) or **Anywhere**; under **People** set someone on their own (e.g. a field worker on phone data = Can sign in from anywhere).
3. A restricted user signing in from outside sends that computer to **Computers** (and the bell): **Approve** it once and it works from anywhere; **Remove** it when a laptop is lost or someone leaves.
4. Only the admin panel is restricted: store, websites, portfolio, online booking and the portals stay open. The SuperAdmin is never blocked. If saving would block you, Murano asks first.

> **Note:** Blocked users see: "You can't use Murano from this network..." on the sign-in page. Clearing the browser's data or using another browser needs a new approval.

Login security

1. **Settings › Login security**: tick the **user types** that must enter a code after their password (admins, employees, customers of the portal, suppliers, sales agents). On AdminSystem the choice is the SuperAdmin's.
2. **Sign-in alerts** (on by default): an email to the person when their login is used from a computer or browser it never used.
3. **Locked logins**: who is locked after 5 wrong passwords and until when; **Unlock** opens it now.
4. **Authenticator app**: who uses one; **Reset** removes it when someone loses the phone (they get email codes again when required).
5. **Recent activity**: the last 100 sign-ins, wrong passwords, locks, codes and password changes, with IP and device.

> **Note:** Rules for every login: 5 wrong passwords in an hour lock it for 1 hour; a standard password must be changed at sign-in (demo logins excepted); new passwords need 8+ characters with letters and numbers and can't repeat the last 3.

Login devices (SuperAdmin)

1. Every session open now: user and email, **company**, **role** and type, device / browser, IP, login and last activity.
2. Filter by dates (presets), **company**, **role** and **user type**, or search; the list comes back as you left it.
3. The trash icon signs one device out; **Logout my other devices** closes your other sessions.

KT-Log (SuperAdmin on AdminSystem)

1. The history of every request worked on Murano, newest first: date, location, status, category, summary and the request.
2. Filter by dates, location, category, status and user, or search; **Open** shows the whole entry, with the closing message as it was sent.

Companies in production

1. **Companies › Edit › Website › Company in production** (SuperAdmin with AdminSystem picked): its data lives in production — nothing done on a development PC is ever sent up for it. The list shows the tag **In production**.
2. Today: Ruba, New Era and Turismo Cautivo. Other companies' work in development goes up at the end of the day.

Demo data (examples)

1. **System Settings › Demo Data**: one set of examples per module, only for the modules the company has on (a school gets School, Website and Portfolio; a hospital gets Hospital; a real estate company gets its listings and inquiries). **Select available** ticks them; **Generate** creates them in the company's language.
2. A module with **Has real data — skipped** is never mixed with examples. **Remove** takes out only the examples.
3. **Delete real data** (SuperAdmin only, School, Hospital and Real Estate): after a confirmation, deletes every record of that module in the company — typed by hand too — so a test company can start over with fresh examples. It cannot be undone.

Mail settings

1. **Settings › Mail Settings**: the mail server the company sends from; **Test** sends a test email.
2. **Admin notices** lists who gets the automatic notices (bookings, POS register); the SuperAdmin can also get a copy.
3. **Send a copy to other emails**: type the addresses (Enter after each) and tick which emails they copy — **Sales** (invoices and payment receipts), **Payment reminders**, **Purchases** (orders and payments). They get a hidden copy; customers and suppliers never see them. Press **Submit** to save.

4. Every company starts with **AdminSystem's mail server**, with the sender name **Admin {company}**. The SuperAdmin, with **AdminSystem** chosen, changes it there and presses **Copy to every company** to send the same server to all companies (each keeps "Admin {company}" as sender name).
